Self-lubricating Sintered Bearings

Sintered Silencers and Filters

bronfil

PERMANENT STOCK

Self-lubricating Sintered Bronze Bearings

■ Self-Lubricating Sintered Bronze Bearings	1.1
■ Application of SELFOIL® Bearings	1.1
■ Type A Cylindrical	1.2 - 1.3
■ Type B Flanged bearing	1.4
■ Type C Spherical	1.5
■ Type D Spherical with collar	1.6
■ Machining rods	1.7
■ Type A Cylindrical, dimensions in inches	1.8

Self-lubricating Sintered Iron Bearings

■ Self-Lubricating Sintered Iron Bearings	2.1
■ Type AF Cylindrical	2.2
■ Type BF Flanged bearing	2.3
■ Type TF Machining rods	2.4

Sintered Silencers and Filters

■ Properties of BRONFIL® filtering elements	3.1
■ BRONFIL® Silencers with thread	3.2
■ BRONFIL® "RL" Silencers with solid brass thread	3.3
■ BRONFIL® Filter Discs	3.4

Self-Lubricating Sintered *BRONZE* Bearings

The SELFOIL® Self-Lubricating Bronze Bearings, achieved by means of sintering, offer:

Safety

- Elimination of the risk of seizure
- Permanent lubrication film
- 20 to 30% of the volume is oil impregnated
- Quiet function
- Low friction coefficient

Economy

- Elimination of lubricators
- Maintenance-free
- Permanent stock
- Immediate delivery
- More than 200 distributors in Europe

Technology

- Very high precision
- Loads up to 10MPa (100 kg./sq.cm)
- Speeds up to 30,000 r.p.m.

Material

- SC-Sn8-Zn4-66 (lead free)

Impregnation oil

- ISO-VG-68 viscosity paraffinic mineral oil
- Temperatures from -20°C to +120°C

Allowable load

- $PV=2,5MPa \cdot m/s$

Presentation

- Packaging in plastic bags with bar code
- The quantity per bag is the minimum order per piece

It is also possible to manufacture bearings with different sizes, materials and lubricants from those indicated in this booklet.

Application

The constant improvement in the manufacture of self-lubricating bearings has allowed to use them in a whole range of manufacturing sectors, such as:

- Sewing machines
- Small appliances
- Locks
- Fans and extractor fans
- Spits
- Electric watches
- Traditional washing machines (washing machine agitators)
- Washing machine water pumps
- Garage doors
- Aluminium sliding windows
- Air conditioning
- Portable machine tools
- Machinery for wood
- Bottling machinery
- Gardening machines
- Key duplicating machines
- Automatic filing cabinets and rollers
- Bus and coach chairs
- Office swivel chairs
- Shaving machines
- Toys (small motors, electric trains)
- Cinema and slide projector
- Turntables and cassettes
- High and low power electrical motors
- Automotive equipment such as alternators, service break pedals, clutch pedal, door hinges, speed counters, windscreen wiper motors, heating motors, gear change levers, distributors, etc.

SELFOIL®

Technical Information

Material	AFNOR FC10-U3-56 SINT A10
Minimum density (g/cm ³)	5.6
Linear speed (m/s)	0.1 to 4
Static Pressure (daN/sq.cm)	450
Dynamic Presssure (daN/sq.cm)	80
PV Maximum	18
Temperature range	-20°C to +120°C
Mineral Oil	ISO VG 68
Minimum Open Porosity %	20
Inside tolerance on d	G7/G8
Outside tolerance on D	s7/s8
Eccentricity out D/ins d	IT 9 (minimum 0.050 mm)

Recommendations for mounting

Mounting conditions are given in the AMES brochure "Self-lubricating Sintered bearings SELFOIL", in the chapter "Mounting of Cylindrical Bearings".

To obtain optimum performance from Iron bearings, we recommend using shafts with the following parameters:

Shaft hardness	> 50 HRC
Surface Roughness	< 0.3
Housing tolerances	H7
Shaft tolerances	f7/g6

Tolerances after mounting of bearing

Cylindrical	H7
Flanged	H8

Special Requests: Ask us

For use in special environments such as high or low temperatures, or in contact with foodstuff, AMES will provide you with homologated solutions.

Machining

See guidelines given in the AMES brochure "How to machine sintered bronze and iron bearings". Machine only under dry conditions and do not use cutting oils. Air can be used as a coolant. Remove dust and filings with a volatile solvent. Reimpregnate with oil after machining according to AMES specifications.

Recommendations for use

Keep AMES bearings in the original packaging until mounting. Do not place the bearings in contact with absorbent materials (cardboard, paper, rag...). Avoid shocks during manipulation. Do not put bearings in contact with water. Re-use after mounting is strongly discouraged.

Bronfil® Silencers and filters

BRONFIL® filtering elements from AMES are state-of-the-art products, effective in multiple applications. BRONFIL® products feature a cleaning-friendly design, mechanical strength, and resistant to extreme temperatures.

Metallic filters are manufactured by sintering metallic particles of homogeneous dimensions, which are previously classified.

The chemical composition of the spherical bronze used for the manufacture of the BRONFIL filters is 90% Cu and 10% Sn.

Properties of BRONFIL® filtering elements

Repeatability

A careful classification of raw materials, together with a steady production process allows to obtain large production series of filters having invariable permeability throughout all their points.

Filtering efficiency

BRONFIL® filtering elements are called "depth filters" because of their unique structure. Fluids are obliged to follow a winding way. This allows to retain particles with needle shape that would otherwise pass in the direction of their smaller size.

Easy cleaning

Filtering elements are cleaned by means of solvents or by reverse circulation (using the same fluid or another adequate one) with no

need to remove the filtering element. After cleaning, the filter recovers its initial characteristics. This property is maintained even after several washings.

Machining

BRONFIL® filters are ready for any machining process, i.e., turning, milling, drilling, etc.

It is not recommended to machine flow surfaces, as it causes pore blinding.

Welding

Welding conditions are similar to equivalent solid materials, except for the inconveniences caused by a large number of pores. BRONZE can be welded by resistance, tin welding or arch welding as required.

Easy machining and welding, as well as a self-supporting structure allow to produce composite or large sized filters.

Corrosion resistant

BRONFIL® elements are resistant to most adverse environments, in accordance with their base material.

Temperature resistant

AMES sintered filters are incombustible, having a rated operation range from -250°C through +200°C (+450°C under a reducing atmosphere).
